

DeskPack 22.07

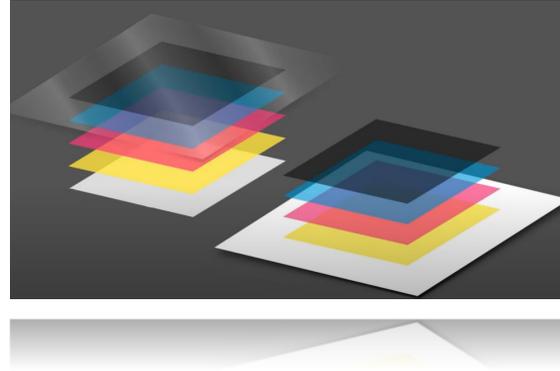

What's New

Frank Woltering

Product Manager Graphic Editing

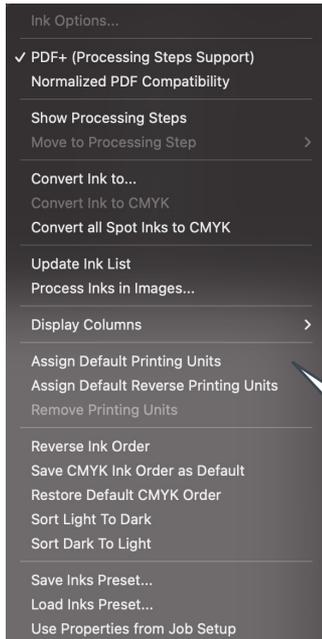

Printing Units

Printing Units

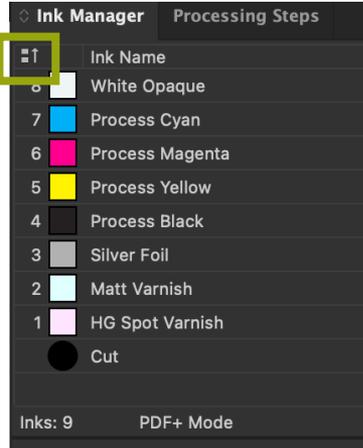

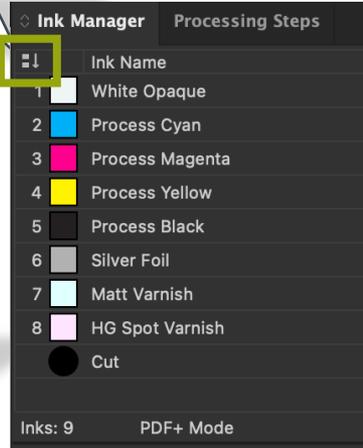

- Managing surface and reverse printed packaging or labels poses a special challenge for service providers and converters because the printing order of inks is the inverse order of the PDF viewing separations
- Esko is introducing the concept of **printing units** allowing you to manage only **one file** - no matter if you print the design surface or reverse
- By adding printing unit information such as metadata, the file can now control the production flow like the behavior of Marks, mirroring the output or naming of output files without jeopardizing the viewing experience

Printing Units

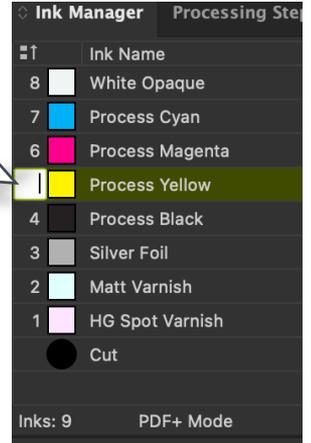

2 The new "printing units" column indicates the surface or reverse sequence

1 Set the initial printing unit numbering in the Ink Manager pull-down menu

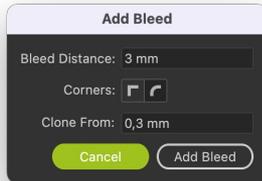

3 Customize printing unit information to reflect special conditions like empty printing decks

boostX

Add Bleed

- Often packaging design artworks are being provided without the needed bleed for cutting
- With boostX “Add Bleed” feature adding the necessary graphics becomes a matter of seconds

Dynamic Barcodes

Dynamic Barcodes

- Added a new GS1 Application Identifier: 4309
- ITF-14, ITF-16, and UPC-SCS barcodes
 - Size of the safe area has been optimised to follow the current barcode specification
 - Height limit of 31.75mm is no longer applied strictly when magnification is less than 100%
- The Ratio of Laetus Pharma barcodes is no longer fixed to 3 but recalculated from the actual wide and narrow bar values.

Dynamic VDP

Dynamic VDP

- Support for Aztec code

PowerLayout Client

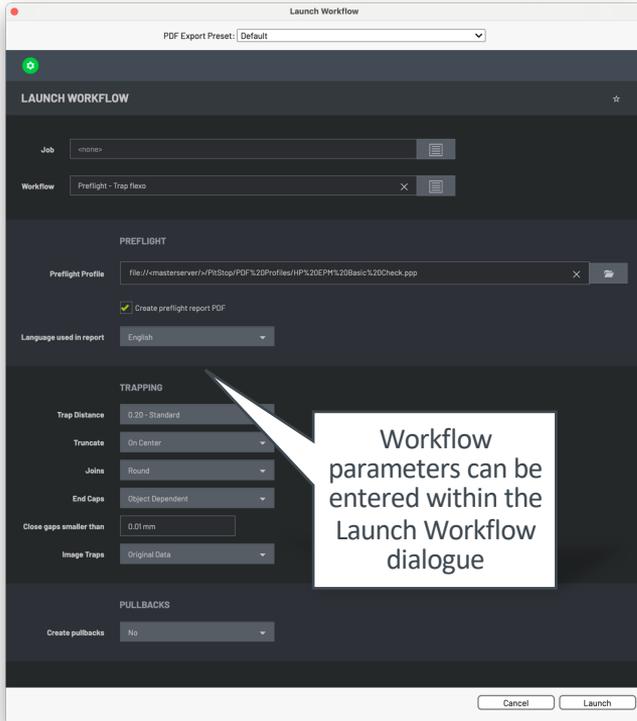

PowerLayout Client

- When working in PDF+ document mode you can now attach a grid to a grid

Automation Engine Connection

New Workspace Dialogues

- Launch Workflow now features integrated workflow parameters
