

# What's new?

Licensing 18

Clara Verstraeten

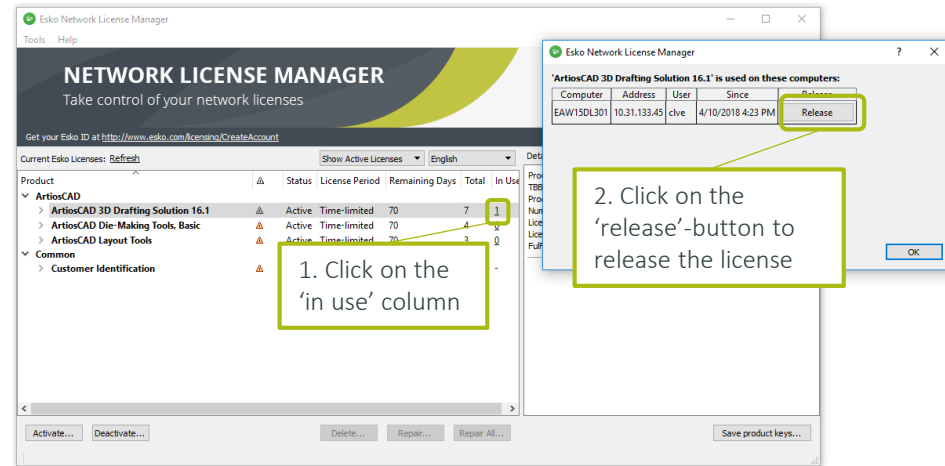

## Key highlights

- Improved network license management
  - Administrators can release locked licenses
  - Users can see which colleagues are using a license
- Bug fixes
  - We fixed some connectivity issues for customers with named user subscriptions
  - We fixed issues with 'drag&drop' on Windows 10
  - We fixed an installation issue on Mac

# Improved network license management

# Release locked licenses – for administrators

- In the Network License Manager, it is now possible to release a license that is in use by a certain user
- Benefit: Network licenses can be used more efficiently, because licenses that are locked unwantedly can be freed up immediately

## Check who is using network licenses – for users

- When all network licenses are in use, individual users can see by who
- Benefit: Network licenses can be used more efficiently, because it's not needed to open the Network License Manager to see who's using which license
