

MediaBeacon 23.03

What's New

Jeevan Mallya

March 2023

New Features On Boarding

Bulk Version
Assets on Upload.

Improved handling
of dynamic dates.

Allow Setting
Default Search.

Bulk Version Assets on Upload

- User Interface / User Experience : One of the MediaBeacon key feature for this release. Esko has built a new UI to support Bulk Versioning of Assets.
- About the Feature : Versioning is an existing feature that allows users to replace single Asset on MediaBeacon with the latest version. With the introduction of Bulk versioning, a user can Version Multiple assets at one go.

Improved Handling of Dynamic Dates

- Enhanced the support for writing Dynamic Dates (\$today) based on configurations.
- Allows Solution Architects to configure Date functionality without writing Javascript.

Allow Setting Default Search

- Allows the General Users to save the search as Default on ACL level.
- The workspace loads with the saved search on Login.

Value For Maintenance

- VFM 23.03 : Downloading the s3-synced and non-s3-synced assets together.
