

MediaBeacon 23.11

What's New

Jeevan Mallya

Oct 2023

New Features On Boarding

- **Extend Renditions download Feature on External Portal.**
- **VFM: 23.11**
 - PSB conversion support.
 - Setting 'Download Original' Option in Preset tab.
 - Bulk Edit ignores OnChange JS.

Extend Renditions download Feature on External Portal

External Portals are used to share the assets via publishing it to a public S3 bucket. On creating the external portal user is provided with a link which can be shared to external users. External users accessing this link can download the shared assets.

In MediaBeacon 23.11, while creating the External Portal, users are provided with an option **“Allow Conversion Downloads”** in the External Portal UI. This option is displayed on both Create and Republish dialog boxes. This option allows MediaBeacon users to share External users a link to download existing renditions of the original assets.

Note that this is a licensed feature. A Publish Rendition license is required to have this feature in the External Portals Dialog.
