Migration

When migrating setups from one WebCenter to another, the following properties will now also be transferred:

- Task Status Icons and Project Status Icons
- Simple Lists linked to Attributes and Specifications
- Document Reference Property Categories

Right to Left Languages (RTL)

This version brings increased support for RTL languages in WebCenter for:

- › Normal Attribute Values
- › Rich Text Attribute Values
- › Discussions
- › Annotations
- › Workflow Notifications

Project Creation

When creating a project from another project or a template, locally referenced documents in the projects will now be copied as well.

Search

You can now search for documents that reference older versions of a document.

Document References

Bulk support for local/remote coping of document references.

Workflow

The following functionality was added to the workflow:

- › Improved support for working with document references in the workflow. You can now select and set document references in the workflow.
- › The "Copy Document Attributes" node was extended to better specify incoming documents.
- › New API calls in the JavaScript node related to task dates.

Package Content Management (PCM)

In this release the package content module has increased support for CHILI documents.

- The "Import Dynamic Text" and "Import Dynamic Graphics" workflow nodes now also works on CHILI Packages.
- A new workflow node has been created to generate a PDF from a CHILI package.
- A new CHILI editor was created that shows the CHILI document side by side with a form. Any change in the form on text, images, attributes, etc. get live updated in the CHILI document.
- The "CreateTextContent" SDK call, can now also assign attribute values.
- PCM Languages can now be assigned to be RTL and can be assigned a custom font family.
