

# What's New in WebCenter 23.11

# User Interface & Experience

Complete work faster with a powerful and intuitive user interface.

- **(23.11) Dashboards Improvements to Protect Unsaved Work**
  - *We've all experienced those moments of unintentionally navigating away from a page or closing a tab, only to realize that we forgot to save our progress. With the new improvements in WebCenter Dashboards, you can bid farewell to that worry. When you have unsaved work on a page and attempt to leave or close the tab, WebCenter will promptly display a warning message, alerting you to the presence of unsaved changes.*
- **(23.11) Improved UX for Unprocessed MS Office Documents**
  - *Creating view data for unprocessed MS Office documents is now easier and more efficient than ever before. Attempting to open an unprocessed MS Office document in the viewer will immediately trigger view file generation, preventing the user from having to re-upload the file.*
  - *Only applicable for WebCenter installations that have MS Office file viewing enabled*

View data needs to be generated for this feature to work. This could take a few minutes. Generate view data?

# WebCenter Cloud \* SaaS Installations Only

Leverage modern cloud architecture to maximize performance and security.

## ▪ (23.11) Video Thumbnail Improvements

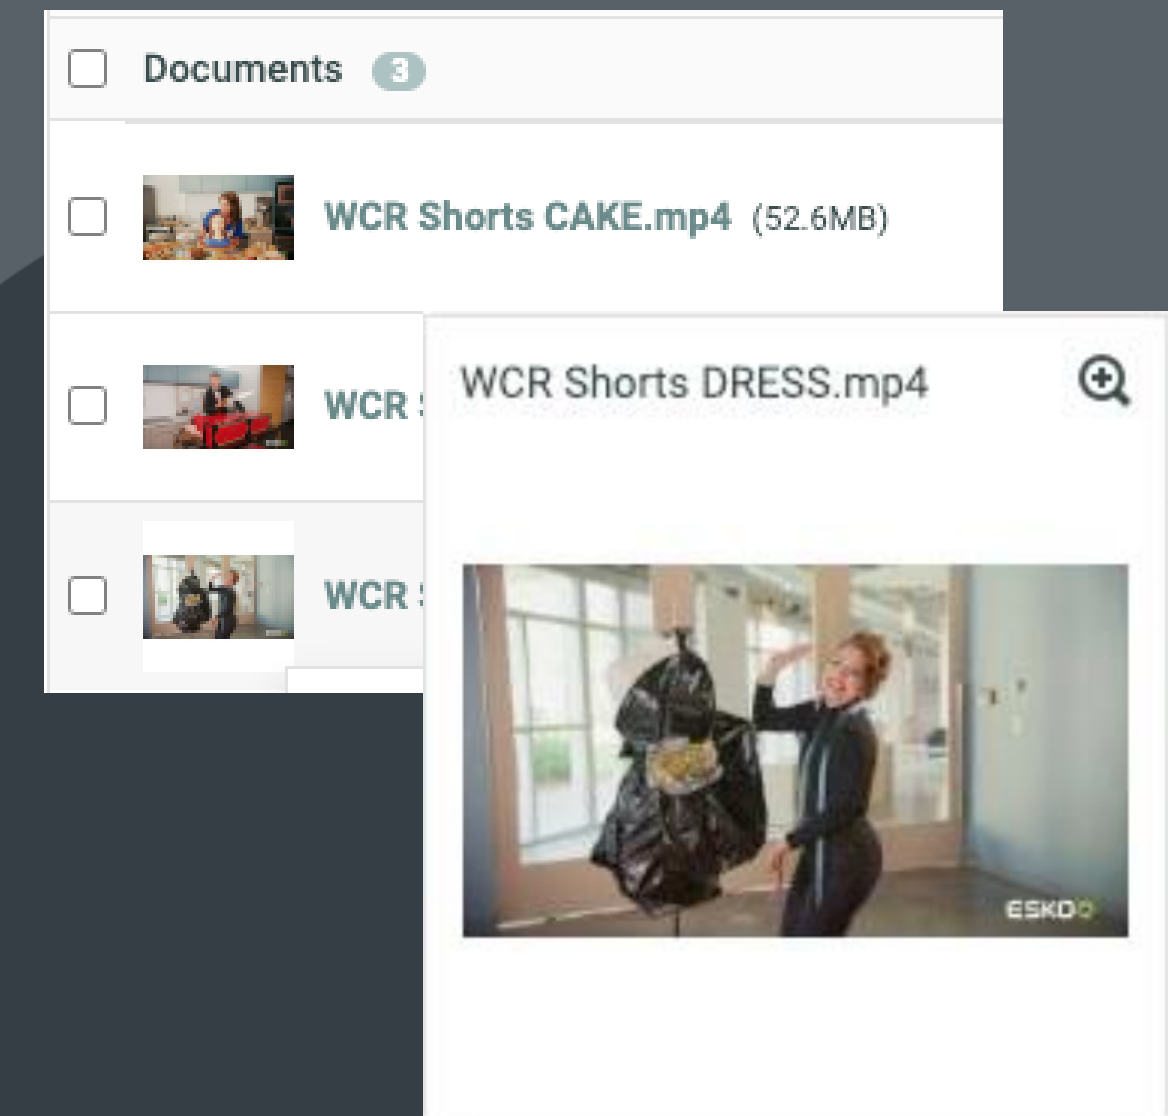

- *Enjoy visually appealing and accurate video thumbnails that provide a clear representation of your video assets. Video thumbnails now maintain the proper ratio to the original video, ensuring a visually pleasing and accurate representation of your video content, making video selection and navigation a breeze.*

## ▪ (23.11) Audio Routing and Approval in the Viewer

- *Experience a more holistic review process as Audio Review becomes an integral part of your collaboration. With the ability to review audio files directly within the viewer, you can ensure that all aspects of your creative projects receive the attention they deserve.*

# Configuration Simplification

Configure and administer WebCenter easier, faster and with less clicks.

- (23.11) Named Configuration Detail Panel
  - The detail panel on the named configuration summary page provides in-depth information about each item within the configuration. You'll gain insights into direct and indirect dependencies, ensuring you have a clear understanding of the complex web of configurations.
- (23.11) Named Configurations & Migration Enhancements
  - Admins can now migrate the following items
    - Document Type Configuration
    - Landing Page Configuration
    - Approval Setup Configurations for Projects and Folders
    - Rule Setup Configuration
    - Document Creation Configuration
    - Document Rendering Configuration
- (23.11) Named Configurations Boundary Feature
  - Enhance your control within Named Configurations. Now, you can exclude specific components within a configuration and steer clear of overwriting shared components. It's all about precision, and it's right at your fingertips!

# Scalability & Performance

Work in WebCenter with more teammates on more projects with the best performance possible.

- **(23.11) 3D Rendering Enhancements**
  - We've executed a full-scale transformation of the 3D engine, now powered by our Studio libraries, to redefine your 3D experience. Whether it's crafting stunning 3D views from ARD files, supercharging CAD+Graphic views, or simplifying component and assembly views, our enhancements deliver unmatched precision and performance.
- **(23.11) Select Document Node Enhancement (Speed)**
  - Introducing a significant performance enhancement in the "Select Document" Node. We've overhauled the Select Document Node to run up to 90% faster, specifically when working within projects with thousands of assets.
- **(23.11) Faster Loading of Content Sheets**
  - Up to 2.5 times faster loading times of large content sheets, making your workflow smoother and more efficient.

# Color Management

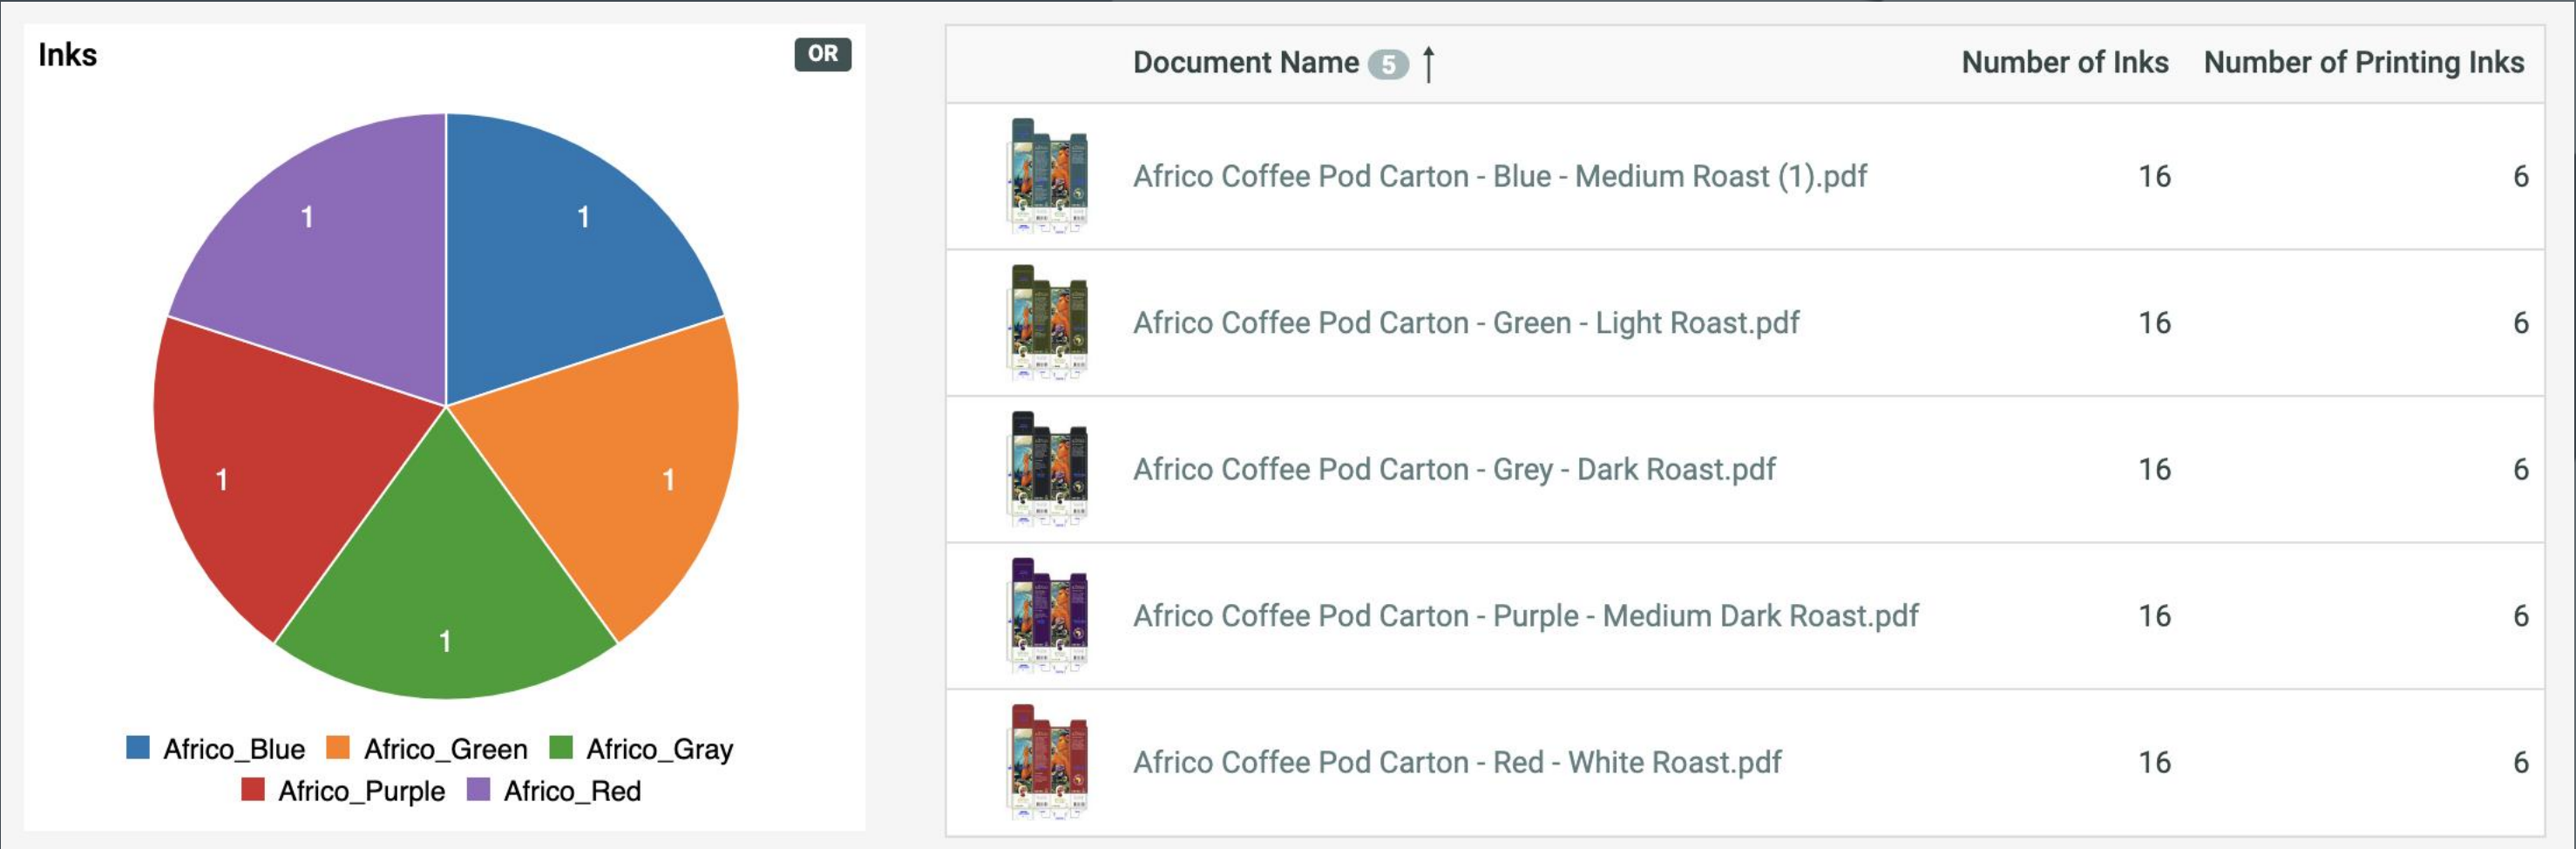

Powerful Color Management Solution within WebCenter

▪ (23.11) Ink Searching

- Powerful new feature that enhances your artwork management. Effortlessly find specific ink names used in your artwork files, as well as identify the total number of inks present in each file. Whether you need to locate artwork files with specific ink colors or gain an overview of the ink usage across your projects, Ink Searching empowers you to do so with ease.

# General Enhancements

- **(23.11) Move or Copy Node Enhancement (prevent auto-naming)**
  - *Experience the freedom of customizing document names during moves or copies within the workflow. By preventing auto-naming, you can tailor document names according to your specific requirements, ensuring clarity and consistency throughout your workflow.*
- **(23.11) Enhanced User Administration Permissions**
  - *WebCenter now empowers administrators to ensure that users can be deactivated, but not renamed or deleted from the system. This added level of control ensures that user profiles are preserved, maintaining a comprehensive audit trail and historical data for compliance and validation purposes. Now, customers, especially those with strict audit and data retention requirements, can have peace of mind, knowing that essential user information remains intact within the system.*
- **(23.11) Enhanced Project History Permissions**
  - *This added level of control ensures that all actions are recorded and saved to the audit history, leaving no room for unintentional omissions or gaps in the historical records. Customers can now have full confidence that their audit trail remains comprehensive and accurate, meeting regulatory and compliance standards.*

The screenshot shows the 'Copy/Move Document' dialog box. The 'Copy/Move' section has 'Copy' selected. The 'Ignore Automatic Document Naming settings in target Project' checkbox is checked and highlighted by a green arrow. Other options include 'Link', 'New version if Document already exists', 'Update Document References', 'Copy Local Referenced Structured Content Documents', 'Copy Viewer Annotations', and 'Keep Text Content Element Status'. The 'Move' option is also available. Below these are fields for 'Project Name', 'Folder', and 'Name'. An 'Additional Security Settings' dialog box is also visible, showing options to 'Allow deleting Users', 'Allow renaming Users', and 'Allow changing Include in Project History settings'. The 'Save' button is highlighted.

Move or Copy Node Enhancement (prevent auto-naming)

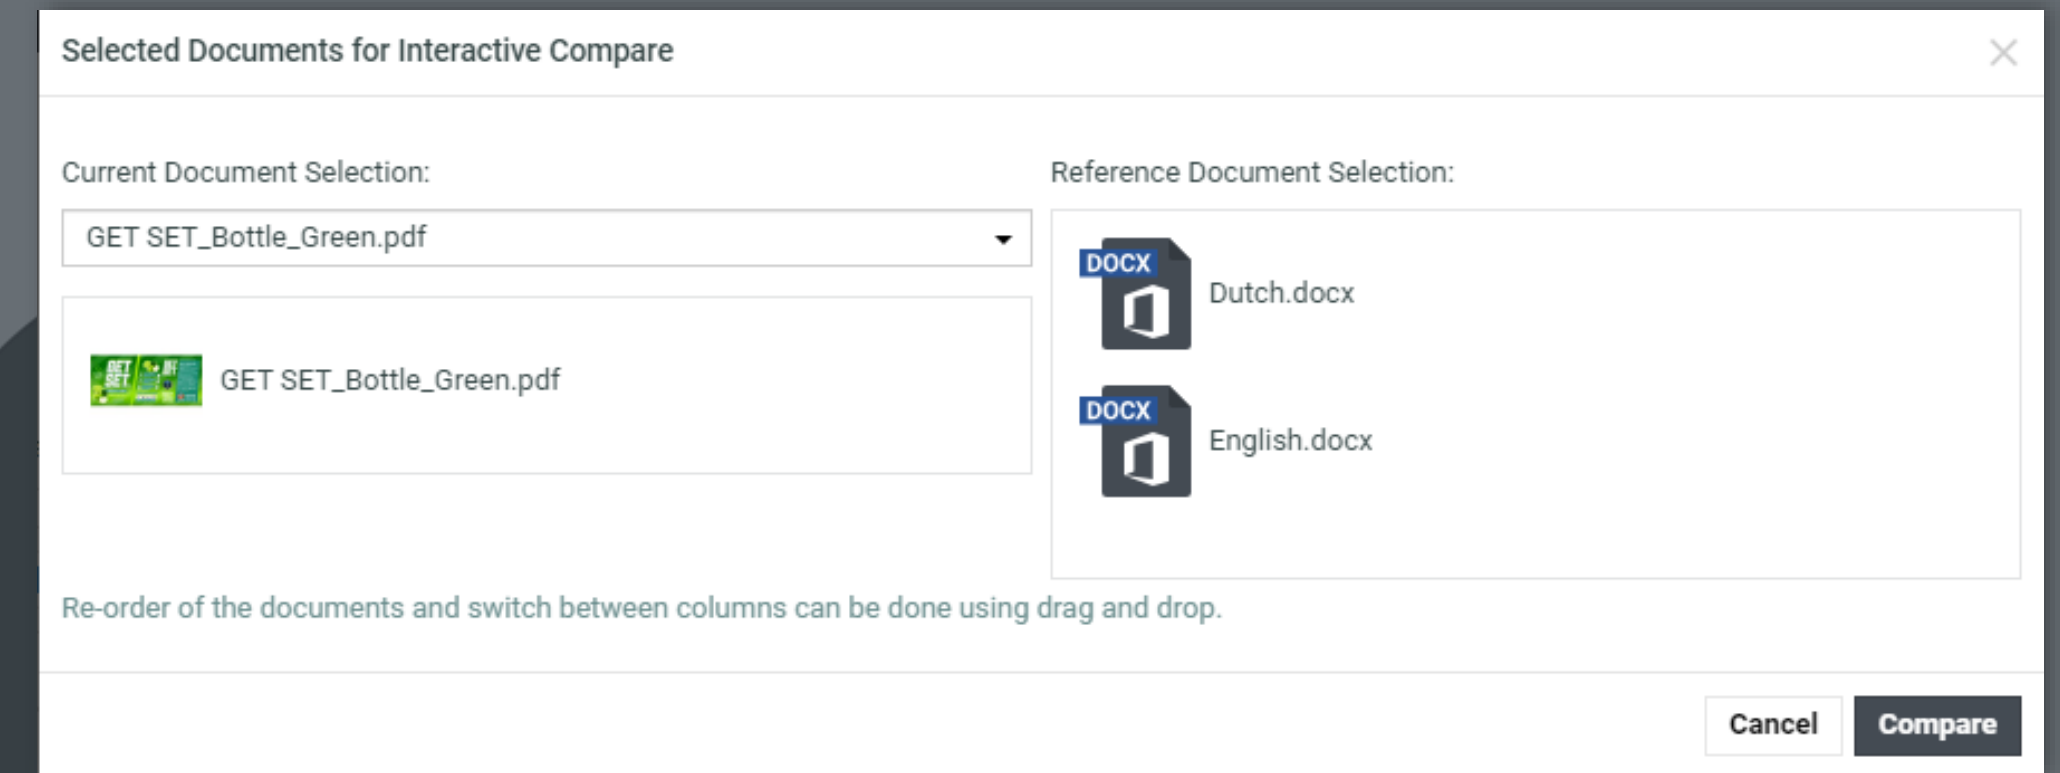

Enhanced Permissions

# General Enhancements

- **(23.11) Send Multiple Reference Files for Text Compare**
  - *We've made it possible to send multiple reference documents alongside your artwork when comparing documents within InformaIT. This flexibility is invaluable, particularly when dealing with diverse language variations or when your content is distributed across multiple word documents.*
- **(23.11) Expanded SDK Functionality with Flexible Admin Rights**
  - *With the ability to query admin rights, developers can create more customized and intuitive interfaces, ensuring that users have access to the appropriate features and functionalities based on their assigned roles and responsibilities.*
- **(23.11) Save Tasks Progress**
  - *Greater flexibility and convenience to your task management. In the past, encountering validation errors in a dashboard form within a task could be frustrating, as users were unable to save their progress and had to rectify the errors before proceeding. However, with the new functionality in the new UI framework, users can save (not submit) their work at any point, without validation, ensuring that no progress is lost.*

Send Multiple Reference Files for Text Compare

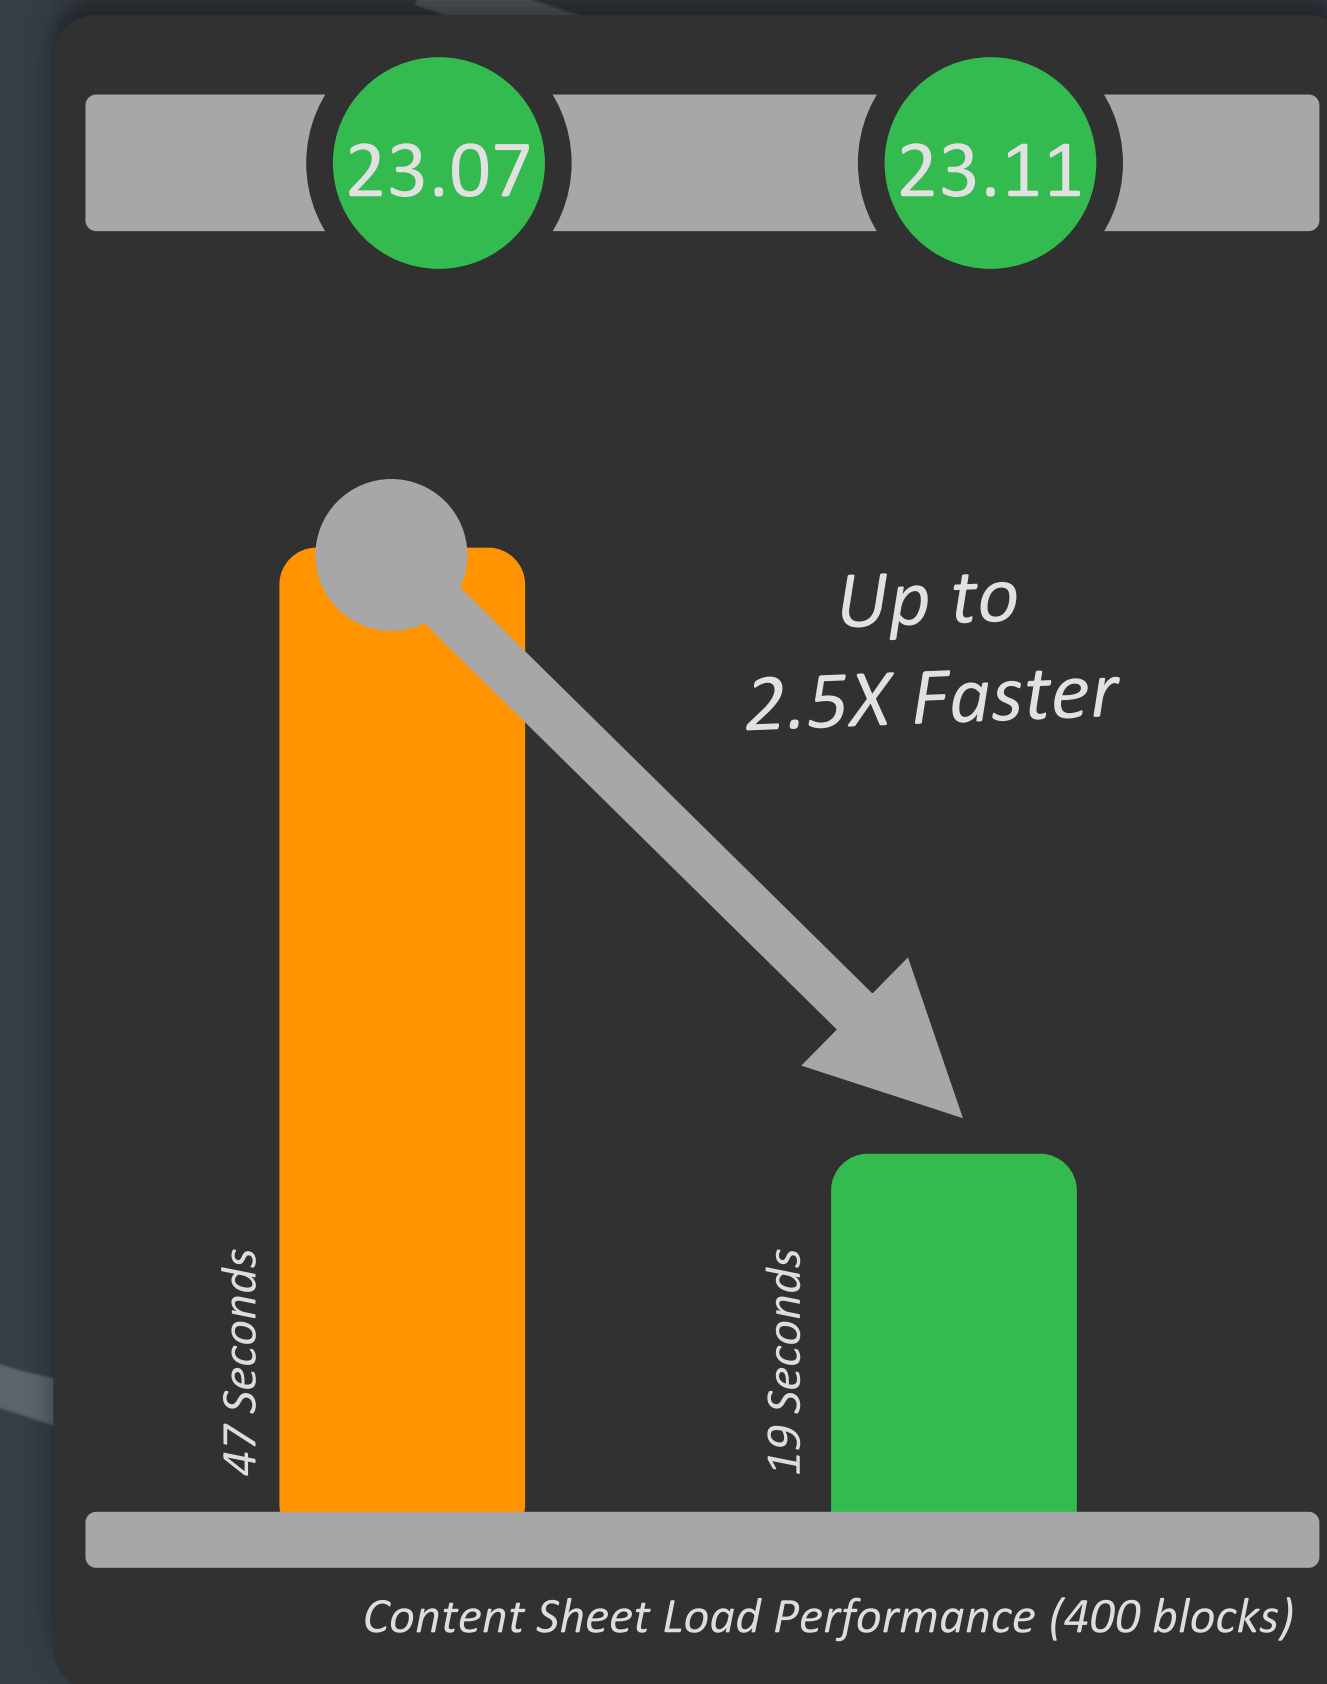

# Content Management for Packaging

*Produce error free packaging by standardizing the content collection process and to automate the flow of content into artwork.*

- (23.11) Faster Loading of Content Sheets
  - *Up to 2.5 times faster loading times of large content sheets, making your workflow smoother and more efficient.*

History: (23.07) Content Sheet Approval, (23.07) Nutrition Facts Handling, (23.03) Export Content Sheets to Excel, (23.03) Global Content Permissions, (22.11) Interface Improvements, (22.11) Language context for dashboards, (22.11) Allow text statement version updates in dashboard, (22.11) Improve performance for large content sheets, (22.11) Chili Cloud support, (22.07) Flexible Master Language, (22.07) Improved Dashboard JS API, (22.07) Improved Save (Performance)

# Content Management for Life Sciences

Standardizing the process to define and approve document content and automating the flow of content into output templates.

- (23.11) Improved Support for Reference Content Libraries
  - Referenced content can now be centralized into area-specific libraries, making it easier to manage, accelerating system performance, and reducing false positives from your version-controlled documents.
- (23.11) InDesign Template Selection Improvements
  - Linking content for InDesign placement has never been easier. Templates will now be automatically selected when you are ready to tag your content. Your users will breathe a sigh of relief at the less needless decisions they need to make so they can focus more on what matters.

Contents of the pack and other information

SECTION

What Soleace® contains

- The active substance is tiotropium. Each mL of solution contains 100 units of tiotropium. Each pre-filled pen contains 300 units of tiotropium in 3 mL solution.

SECTION

What Soleace® looks like and contents of the pack

Soleace® is presented as a clear, colourless, aqueous solution for injection in pre-filled pen.

Documents with Outdated Referenced Content (8)
