What's New in WebCenter 24.03

- (24.03) Pin Columns for Customized Viewing
 - Pin columns to either the left or right side of your screen, ensuring the information most important to you is always within view. This feature allows for a more personalized and efficient workspace by keeping critical data fixed while you scroll through other content. Whether it's tracking key metrics or keeping essential tools accessible, pinning columns enhances your ability to multitask and stay organized.
- (24.03) Content Sheet Approval Discussion Improvements
 - WebCenter now offers streamlined discussion management for content sheet approvals. Features include resolving discussions to concentrate on pending items, disabling comments post-approval for clarity, and presetting discussion participants for targeted communication. These updates foster a more focused and efficient approval process.

- (24.03) Enhanced Notification Preferences
 - Now, directly manage your alert settings with our new notification preferences. Easily opt out of notifications you don't need without admin intervention. This update provides a straightforward way to control what you see and when, making your experience more personalized and less cluttered.
- (24.03) Dashboard Task Creation Enhancements
 - Introducing new buttons in the dashboard for quicker task creation—either preconfigured for immediate action or customizable via a form. Now, you can also start tasks directly from a form, adjust task lead times for automatic due date updates, and link task due dates with project milestones for better alignment.
- (24.03) Task Window Update: Save Without Closing
 - Now, when you click "save" while working on a task, the window stays open, allowing you to continue your work uninterrupted. This update removes the need to reopen the task after saving, streamlining your workflow.

(24.03) Convert on Download: Flexible Format Options

- Enhance your workflow with our new "Convert on Download" feature. Now, users can select from allowed formats for downloading assets. Administrators can configure this feature to enable users to convert and download files in preferred formats directly from the cloud. Once the conversion is complete, users will receive an email notification with a link to download the converted file, streamlining the process and ensuring you have the right format at your fingertips.
- (24.03) Widget availability in Deep Zoom Mode
 - Approval details and the attribute category widget are now accessible in Deep *Zoom mode, facilitating the approval or rejection of artwork without* interruption.
- (24.03) Search Text in Microsoft Office Documents
 - *Text search now includes MS Office documents for SaaS WebCenters.* Activating "Live Text" search for PDFs and Adobe Illustrator documents extends this capability to MS Office files, enhancing document search-ability.

HISTORY: (23.07) Time Based Annotations (23.07) Native Video Support* (23.07) Asset File Type Conversion Node (Enhancement)* (23.03) New File Type Conversion Workflow Node* (23.03) Blue/Green Deployment Support* (22.11) Deep Zoom Mode Available for all SaaS Customers *

(24.03) Variable Data Printing "VDP" Manager Module

- VDP Manager: Revolutionizing Digital Print Reviews and Approvals The VDP Manager, a new option for WebCenter, is designed to streamline the review and approval process for promotional variants in digital printing. This innovative module allows users to effortlessly load, view, and approve variant data—ranging from images and text to barcodes directly within the artwork template. With support for multiple variants per artwork, the VDP Manager ensures that each piece is print-ready, enhancing efficiency and accuracy in digital printing projects.
- *Key Features:*
 - Enhanced Viewing Experience: Utilize the VDP Viewer to seamlessly preview and approve artwork variants in one comprehensive interface.
 - Effortless Data Integration: Easily upload variant data using CSV formats and interactively update your database within the viewer.
 - Dynamic VDP Preflight Reports: Generate and view VDP Preflight Reports directly in the widget, identifying and resolving errors and warnings without navigating through the entire document.
 - Comprehensive Variable Data Support: From placeholder support for PDFs to live previews of updates, manage every aspect of your variable data with precision.
- VDP Manager transforms the way promotional variants are reviewed and approved, offering a robust solution for ensuring the integrity of your digital prints. Whether updating values or detecting potential issues before they impact your project, this module is your key to a streamlined, error-free digital printing process.

Variable Data Printing Management

- (24.03) Enhanced Named Configuration Migration and Management
 - This update brings critical advancements to the management and migration of Named Configurations, streamlining administrative tasks and ensuring smooth transitions across servers.
 - Efficient Configuration Handling: Enhancements in indexing, comparison, and migration processes for project and template configurations simplify the setup and maintenance of Named Configurations.
 - Document Approval and Reference Migration: Improved migration processes for document approval setups and reference values, ensuring only relevant references within Named Configurations are carried over, with clear guidance on handling external and outdated references.
 - Metadata Insights for Better Transfer: Exported Named Configurations now include detailed metadata, offering insights into the source system and facilitating informed decisions during imports with a comprehensive impact analysis.
 - Streamlined Impact Analysis and Import Logs: The import process is refined with a better-organized impact analysis and a separate tab for import logs, enhancing clarity and making it easier to assess and manage changes.
 - Designed for administrators, these improvements aim to optimize the creation, analysis, and migration of Named Configurations, making it easier to replicate and deploy configurations across different server environments.

Sample configuration import UI

- (24.03) Automatically Populate Document Reference Forms
 - Automatically populate document reference forms with the new "OnAdded" Script. This feature allows the addition of an "On Document Added" script to document reference attributes in a dashboard form. The script activates when a document is added, referenced, copied, or uploaded, streamlining the document management process.
- (24.03) Automatically Populate Project and Task Forms
 - Enhance form efficiency with the 'on form initialized' script to pre-populate your forms. Dashboards now support defining On Form Initialized Scripts, executed upon dashboard form initialization. These scripts, applicable in Project, Document, and Task Dashboards in Edit or Create mode, can modify objects in the current context to streamline form preparation.
- (24.03) Task Creation from Dashboard
 - Easily create tasks directly from Dashboards using Buttons, Inline Actions, or Table Actions. If linked to a creation Dashboard, users can fill out a pop-up form with task specifications. Tasks can be started or saved for later with corresponding buttons. For tasks initiated from document dashboards, automatic document attachment is possible, streamlining task setup.
- (24.03) Customizable Document Viewer Modes
 - Enhance document viewing with customizable modes. Set documents to open in Standard or Deep Zoom modes, with optional flexibility to switch between them. This update streamlines document interaction, allowing for a more efficient and personalized viewing experience.

Task Creation from Dashboards

- (24.03) Faster Discussions for Large Groups
 - We've significantly improved loading times for discussions with extensive participant lists. By optimizing backend permission checks, discussions now load up to 34 times faster than before, making your experience smoother and more efficient, especially in projects with over 1000 participants.
- (24.03) Enhanced Content Sheet Render Speed
 - Content sheets now render up to 84% faster, providing a more responsive and efficient experience when loading content sheets.
- (24.03) Improved rendering speed of certain 3D scenes
 - The 3D viewer was updated. The update brings performance related fixes. Models with complex (repeated) geometry will load significantly faster in the viewer.
- (24.03) Enhanced Security with Veracode CVSS 3 Compliance
 - WebCenter has achieved a significant security milestone by adhering to Veracode CVSS 3 standards, ensuring a more secure platform for our users. This compliance means we've thoroughly assessed potential vulnerabilities against a comprehensive framework, focusing on factors like attack complexity and user interaction, to provide robust protections against security threats. Our commitment to CVSS 3 standards reflects our dedication to maintaining high security policy compliance, offering peace of mind and a safer environment for all users.

- (24.03) WebCenter Tasks Plug-In: Support for Structured Content Documents
 - The WebCenter Tasks Plug-In now facilitates importing structured content directly into Adobe InDesign, complementing its capabilities for multi-page artwork like leaflets. This update simplifies artwork adjustments and template testing, integrating seamlessly with WebCenter's automation features for efficient design workflows.

HISTORY: (23.07) Annotation Overlay (23.07) Support for All Annotation Types (23.07) Annotation Author Visibility (22.03) Task Plugin: The Task Plugin is available for download here: <u>https://www.esko.com/en/support/downloadsandlicenses/free-software</u>

Soleace® 100 units/mL solution fo injection in pre-filled pen tiotropium

Read all of this leaflet carefully before you start using the medicine because it contains important information for

- Keep this leaflet. You may need to read it again.
- If you have any further questions, ask your doctor, pha cist or nurse
- This medicine has been prescribed for you only. Don it on to others. It may harm them, even if their sign are the same as yours
- If you get any side effects, talk to your doctor, phar nurse. This includes any possible side effects notthis leaflet. See section 4.

What is in the leaflet

- 1. What Soleace® is and what it is used for
- What you need to know before you use Soleace®
- How to use Soleace®
- Possible side effects
- 5. How to store Soleace®
- 6. Contents of the pack and other information

What Soleace® is and what is it used for

Soleace® is a long-acting basal insulin called tiotropi used to treat diabetes mellitus in adults, adolescents children aged 1 year and above. Soleace@ helps your reduce your blood sugar level. It is used for once-dail On occasions when you cannot follow your regular do schedule, you can change the time of dosing becausi has a long blood sugar-lowering effect (see section 'Flexibility in dosing time'). Soleace® can be used wi related rapid-acting insulin products. In type 2 diabet Soleace® may be used in combination with tablets f or with injectable antidiabetic medicines, other than In type 1 diabetes mellitus, Soleace® must always be combination with meal-related rapid-acting insulin m

What you need to know before you use Soleace

Do not use Soleace®

 If you are allergic to tiotropium or any of the other of this medicine (listed in section 6).

Warnings and precautions

••• General Enhancements

(24.03) Secure Download Link with Verification

- Enhance file sharing security with secure download links, a feature that must be enabled by an administrator. This allows for the secure distribution of files to external parties, where recipients are required to enter a verification code received in a separate email before downloading. This added layer of security ensures that sensitive information is protected and accessed only by intended recipients.
- (24.03) Integration Capability with GlobalVision Verify
 - WebCenter now supports integration with GlobalVision Verify, enhancing our text comparison suite alongside TVT and InformalT. This new feature is ideal for customers who already use GlobalVision Verify for artwork approval and content inspections, offering an uninterrupted workflow within WebCenter. For integration, customers need to have their own GlobalVision Verify subscription. The necessary integration kit is available for purchase from ESKO, facilitating seamless inspection processes and reporting back to WebCenter.

(24.03) Easy Upgrade to Registered Users

Now in WebCenter, easily convert unregistered users (email-based approvers) to registered users directly from the User Management page. The system automatically identifies and suggests upgrades for existing unregistered users, streamlining their transition to full user status while retaining their approval history.

HISTORY: (23.11) Move Copy Node Enhancement (prevent auto-naming) (23.11) Enhanced User Administration Permissions (23.11) Enhanced Project History Permissions (23.11) Multiple Reference Files for Text Compare (23.11) Flexible Admin Rights SDK (23.11) Save Tasks Progress (23.07) Administrator Group Rights (23.07) Values (23.03) Saved Search Export can now be canceled. Secure Download Link Verification

GlobalVision Verify Integration

- (24.03) Translation Filtering for Text Statements
 - Enhance efficiency with translation filtering, allowing you to display only relevant languages. This feature simplifies updates by reducing the need for extensive scrolling through dozens of translations, focusing only on those applicable to your project.
- (24.03) Improved Rich text Controls
 - Dealing with 25 text statements, each with 25 languages, means that screen real estate needs to be carefully managed. In 24.03, we've moved the formatting tools to be outside the text box being edited, giving you more room to work.

History: (23.11) Faster Loading of Content Sheets (23.07) Content Sheet Approval, (23.07) Nutrition Facts Handling, (23.03) Export Content Sheets to Excel, (23.03) Global Content Permissions, (22.11) Interface improvements, (22.11) Language context for dashboards, (22.11) Allow text statement version updates in dashboard, (22.11) Improve performance for large content sheets, (22.11) Chili Cloud support, (22.07) Flexible Master Language, (22.07) Improved Dashboard JS API, (22.07) Improved Save (Performance)

(24.03) Fonto Editor Upgrade 8.6: Enhanced Language and Comparison Features

- The latest Fonto Editor upgrade introduces Right-to-Left language support, enabling seamless authoring and reviewing in RTL languages. Additionally, improved table comparison offers precise insights into data changes, moving beyond the 'all or nothing' approach to highlight specific alterations in tables on leaflets. This enhancement ensures critical data points are accurately tracked across versions.
- (24.03) Revert a Topic in Structured Content Editor
 - Choosing to edit a topic was a reserved action for when you were absolutely sure you were going to make edits. Now you can check out with abandon, as those changes can be reverted back to their library versions with no impact to your structured content document.

(24.03) InDesign Content Previewer

For managing content, context is critical - where and how a particular content element appeared on the packaging or leaflet artwork which was always only available once artwork was automatically generated. In 24.03, when using InDesign artwork templates, you can now preview how content appears in the Viewer before artwork is generated, making Right-First-Time that much closer.

History: (23.11) Improved Support for Reference Content Libraries (23.11) InDesign Template Selection Improvements (23.07) Improved Loading for Documents in Editor, (23.07) Show Outdated Content References in Outline, (23.03) Previewing Structured Content, (23.03) Transfer Output Styles automatically to InDesign Leaflets, (23.03) Toggle Whitespace in the Editor, (22.11) Allow copying of artwork tags between maps, (22.11) Include changes from the previous version when preparing submissions, (22.11) Continuing to improve and simplify the user experience, (22.11) Notify editors when source content has been updated, (22.11) Allow users to see source content when editing a translation, (22.11) Support for wider variety of Word output formats, (22.07) Compare Content Maps, (22.07) Granular Tagging (finer control of placement in InDesign), (22.07) Editor (Fonto) Improvements, (23.07) Improved Loading for Documents in Editor, (23.07) Show Outdated Content References in Outline
